

About the company

Audaces is world renowned for technological innovation in the fashion industry. For more than 25 years, we have created solutions that are easy-to-learn, use and maintain, which accelerate fashion creation, development and production.

We are audacious, our intelligence also fulfills the needs of other industries such as upholstery, shoes, furniture, transportation and other flexible materials.

We are partners and facilitators; we know that every client has a challenge, so we offer solutions that adapt to different needs.

We are global leaders in Latin America and we are present in over 70 countries around the world. More than 40,000 fashion professionals use the products of Audaces daily.

We innovate starting at the development of accessible solutions, guaranteeing the deployment of the technology in an agile manner at companies of all sizes.

The multi solution Audaces360 and Cut Room 4.0, have multi connected revolutionary technologies for those who want to enter the industry 4.0 world. To innovate is in Audaces' DNA. Every director, manager, and employee is motivated to include innovation in everything they do, seeking to offer solutions never seen before.

Our goal is to help your company produce more and better. Regardless of size, style or geographical location. With solutions from Audaces, your company can increase design, increase productivity, improve product quality and save resources.

*"The future belongs to those who innovate every day, who venture into new businesses. This is what Audaces believes, this is the reason for its existence.
Claudio Grando, CEO of Audaces*

Our main research and development plants

Florianópolis, Brazil

Technological plant in a city that breathes and inspires fashion.

With a picturesque landscape, Audaces is one of the main technology centers of the Americas, in the capital of a state that breathes and inspires fashion.

Trento, Italy

Mechatronics technology industry in the country of fashion

In Italy, the creative fashion center of the world, believing in the transformation force of design, we are in the region of Trento, one of the most important poles of mechatronics technology in Europe.

Technology for the Fashion Industry

Connected to the importance of technological innovations for the textile sector, Audaces is anticipating the future of the 4.0 industry of fashion - process management is done with accurate and integrated data, with the possibility of remote access. It is about production on the palm of the hand, establishing the Internet of things (IoT) in the industry of the sector. The cutting-edge technology is the highlight of the new generation of Audaces products.

Neocut Bravo is the most efficient cutting machine on the market

Audaces Neocut Bravo is the safest and smartest automatic fabric cutting machine in the world. The production - including time, day, week and month - is fully timed, allowing this data to be managed by Neocut Mobile to prevent losses and speed up the production process. Its state-of-the-art technology enables the exchange of information with other machines and even suppliers, telling a workshop that the cutting phase is complete and that the parts are ready to go to sewing, for example.

Among the distinct features is the cutting head, which has more than 300 sensors, ensuring the best cutting condition for different types of fabric and different heights of weakness, with excellence in the execution and finishing. The high precision of the machine guarantees scalable production without raw material wastage, by cutting with zero spacing between the patterns.

Versatility is the strength of the new Neocut SL

Speed and economy in the production of exclusive garments is what guarantees the automatic cutting machine Audaces Neocut SL for fabrics. Its main purpose is single layer cutting, combining the use of various types of tools to perform cuts. The equipment cuts a variety of garments into fabrics and flexible materials, streamlining the process.

Its state-of-the-art computer sight system recognizes the contour patterns of printed patterns with prints directly on the fabric, making cuts automatically, almost without operator intervention.

Audaces 360 Multi Solution

Audaces 360 is the most complete systems solution for the fashion industry. The purpose of the system is to facilitate all the processes of a clothing company - from the creation of the parts, to the pattern making, grading, nesting and plotting, and finishing of the cut. The idea is to enable automated, simple and digital processes to be integrated and optimized, reducing costs and maximizing profits.

The system is the only one with 4D - the feature allows the stylist to see their ideas right after imaging them directly on the computer with just a few clicks. With the 4DAIze technology, the professional can visualize the clothes from the first moment, in a three-dimensional manikin, increasing the assertiveness of the collection. Among the advantages of Audaces 360 are the simulation of costs in the creation phase, the digitization of the patterns, the automation of the technical data sheets and constant updates for a better experience. All of this in an integrated and efficient way, providing increased productivity.
